Our purpose is to empower our people to deliver sustainable and innovative engineering and construction solutions in a safe and secure way.

We aim to:

- ▶ Prioritise the safety and wellbeing of our teams, ensuring everyone returns home safely, every day
- ▶ Ensure our people are at the heart of everything we do
- ▶ Build a sustainable business that is fit for the future
- ▶ Develop innovative and forward-thinking engineering and construction solutions
- ▶ Deliver excellence to construct a more secure tomorrow

“We are focused on delivering success through our people.”

Richard Offord
CEO

At the heart of our business is a simple belief: great organisations are built by people who care about what they do, who they work with, and the impact they make.

Every day, we work to deliver excellent outcomes for our clients and partners by combining our expertise, integrity and a shared sense of purpose. We take the time to understand our clients' needs so we can exceed expectations and deliver on our commitments with confidence. We achieve this by having a strong, robust long-term business strategy that ensures we deliver quality work, whilst keeping health, safety, and client satisfaction at the centre of everything we do.

We are committed to creating lasting social value in the communities where we work. By building strong partnerships with like-minded clients and supply chain partners, we make responsible, forward-thinking decisions about how our projects are delivered. We also aim to be recognised as a business with a diverse, inclusive and safe workforce that inspires future generations, protects the environment and helps connect communities through construction and engineering excellence.

We are proud of what we have achieved and even more focused on what comes next. By continuing to evolve, embrace new ideas and work together, we are building a resilient, responsible business that is ready for the future. Our commitment remains the same: to deliver quality, work collaboratively with our partners, celebrate our people and make a positive impact in everything that we do.

We are a leading multidisciplinary contractor delivering innovative engineering and construction solutions.

Our Group is made up of five core business units:

VolkerFitzpatrick

VolkerRail

VolkerStevin

VolkerHighways

VolkerLaser

Our Nationwide Business

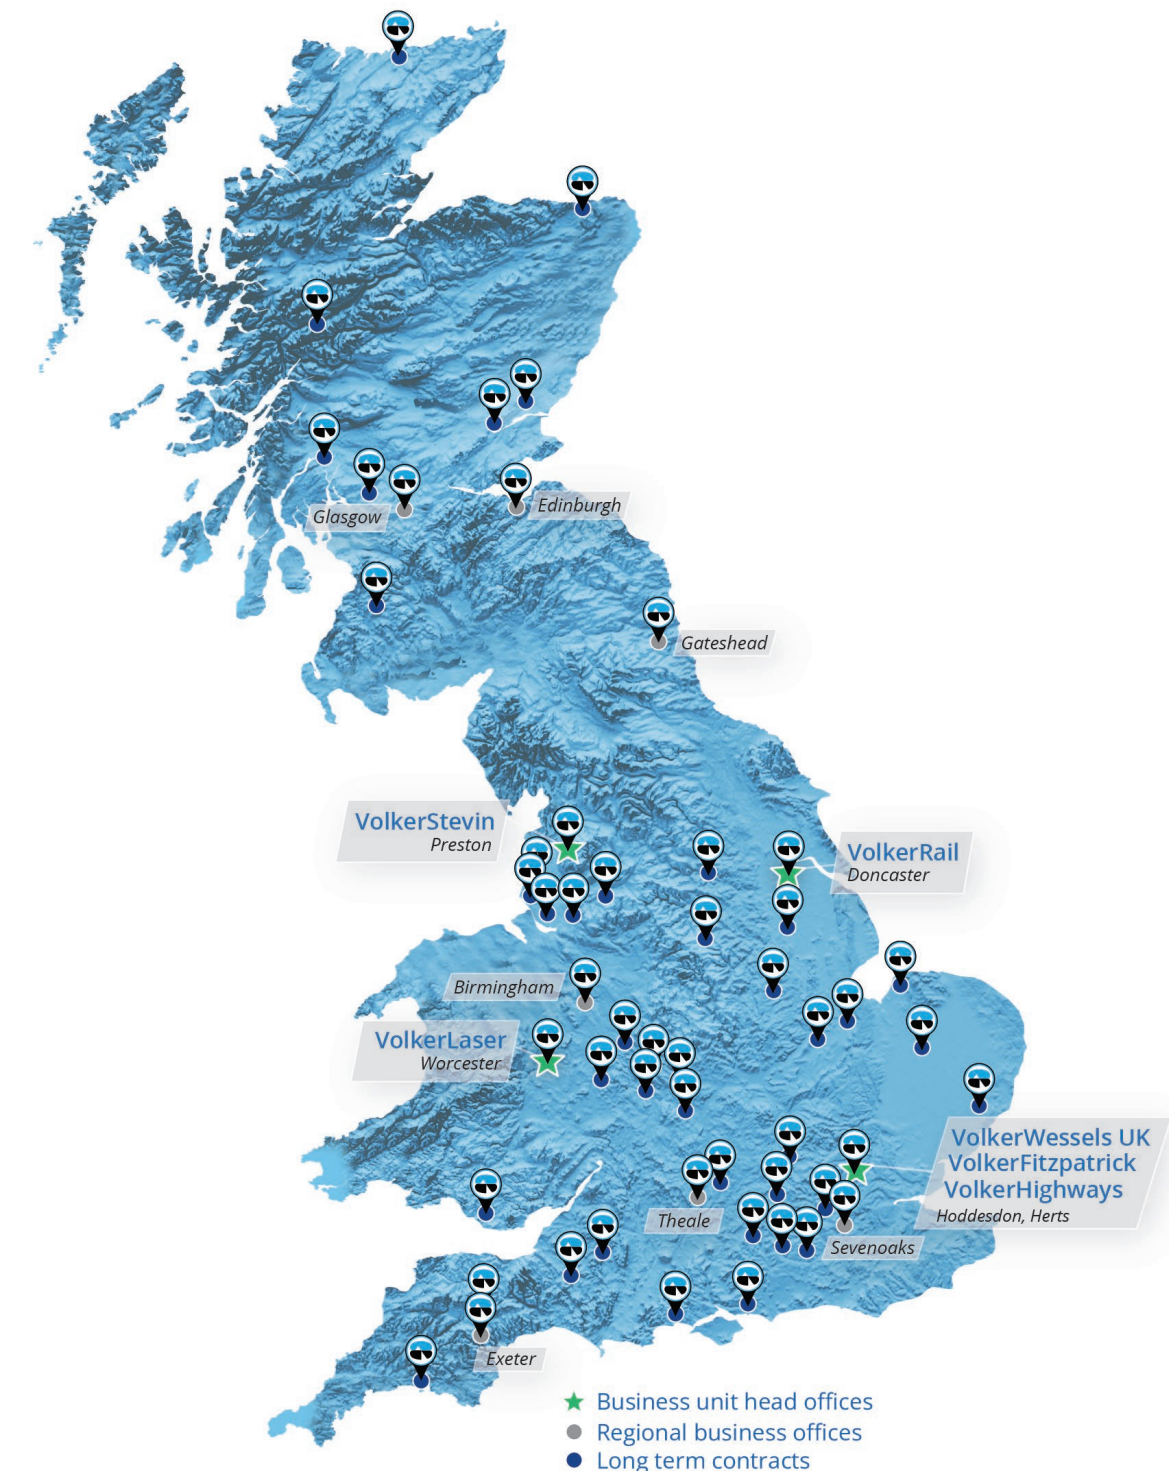

We operate nationwide, with offices and sites across the UK. At any given moment, our teams are active on more than 250 locations, delivering landmark infrastructure and engineering projects for major clients in key sectors such as rail, highways, aviation, ports, defence, energy, water, and the environment.

250

live sites across the UK

400

different types of employment opportunities

Aviation

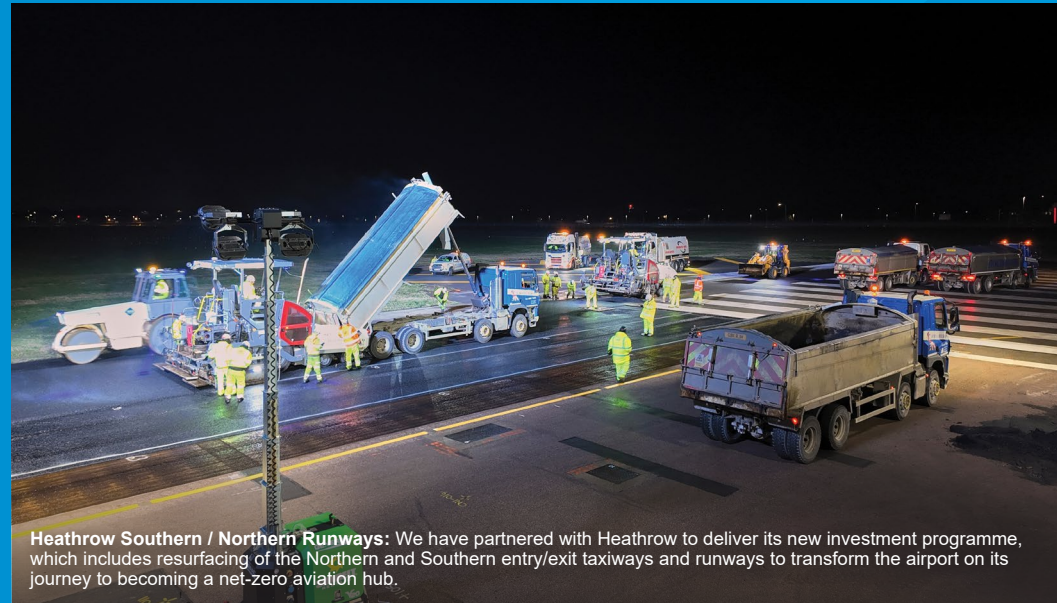

With a long and successful association with many of the UK's biggest and busiest airports, we are recognised for delivering first class aviation infrastructure within tight timeframes whilst ensuring minimum disruption for our customers and end users.

Southampton: We have completed a large scale project at Southampton Airport where we have extended the northern end of Southampton's runway, attracting new airlines and offering new routes.

RAF Leeming: We completed a multi-million-pound Airfield Operating Surfaces (AOS) project, successfully modernising the base's runway and infrastructure.

Heathrow Southern / Northern Runways: We have partnered with Heathrow to deliver its new investment programme, which includes resurfacing of the Northern and Southern entry/exit taxiways and runways to transform the airport on its journey to becoming a net-zero aviation hub.

RAF Lossiemouth: We resurfaced the runways at RAF Lossiemouth as part of a £75 million upgrade programme to prepare the base for new P-8A Poseidon aircraft and support its long-term future.

Defence

We are experts in designing, building, refurbishing, and maintaining the nation's vital defence infrastructure in highly restricted and secure environments.

RAF Lakenheath: As part of a joint venture, we have completed upgrade works to RAF Lakenheath in Suffolk, on behalf of the Defence Infrastructure Organisation.

HMNB Portsmouth: We have delivered a programme of improvements to operational berths and support facilities, enhancing Portsmouth Naval Base's capacity to accommodate modern naval fleets and ensuring efficient, safe and future proof maritime operations.

HMNB Clyde: We are part of a multi-year £1.3bn modernisation programme at Faslane and Coulport, enhancing the naval base's capability to support the UK's continuous at sea deterrent and ensuring resilient, future ready infrastructure across one of the nation's most critical defence estates.

RAF Brize Norton: We are upgrading the runway at RAF Brize Norton by delivering a rehabilitated Airfield Operating Surface (AOS), including refurbishment of pavements, airfield ground lighting (AGL), surface water drainage, and associated infrastructure.

Falkland Islands: We have successfully delivered three new modular accommodation blocks at Mt Kent, Mt Alice & Byron Heights in the Falkland Islands on behalf of the Defence Infrastructure Organisation and Strategic Command.

Energy

We are helping the UK move towards a zero-carbon and energy-secure future by connecting new offshore wind farms to the national grid and delivering infrastructure for new nuclear power, hydrogen and carbon capture, usage and storage.

Hornsea 3: We have installed 220km of onshore cables at what will be the world's largest offshore wind zone, generating low-cost, clean and renewable electricity.

Sizewell C: We are delivering essential enabling works that support the development of the UK's next GW scale nuclear power station, helping strengthen national energy security and accelerating the transition to low carbon electricity generation.

Sofia OWF Onshore Cable Route: We provided full turnkey delivery of 400kV onshore connection for the 1.4GW Sofia Offshore Wind Farm, establishing the critical link between offshore generation and the national transmission network.

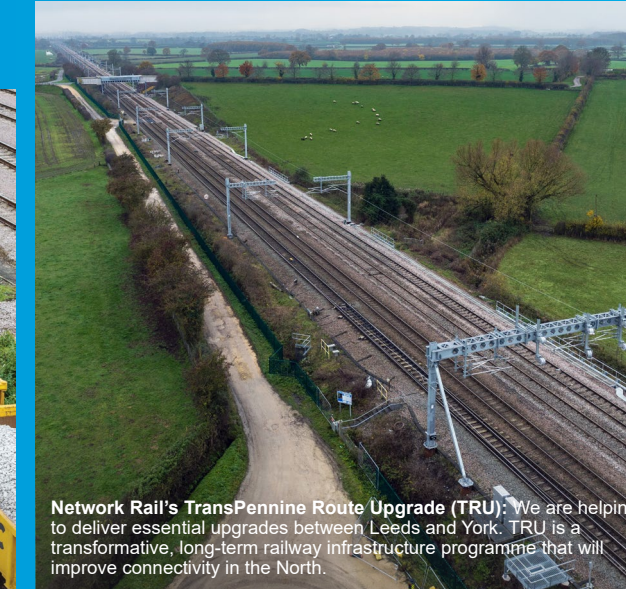

National Grid: We deliver the full range of civil engineering works and services to facilitate EHV cable installation for electricity transmission projects, connecting cleaner energy sources while improving energy security for generations to come.

Rail

We play a critical part in helping to transform the UK's rail network through improved infrastructure and by providing better services for freight operators, train operators and passengers.

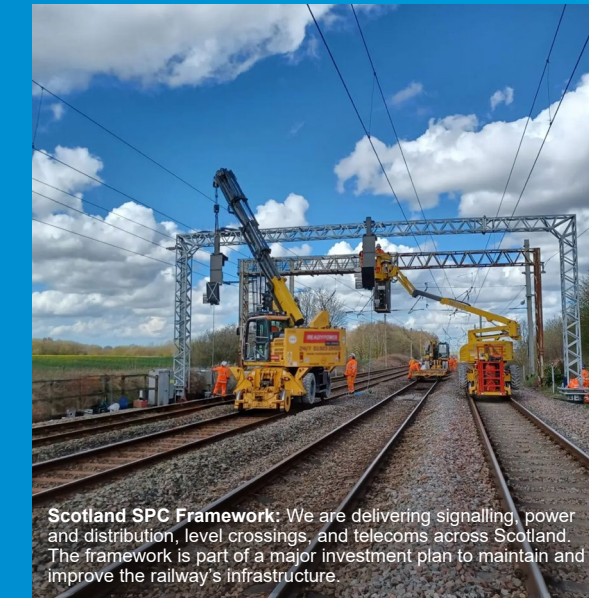

Southern Renewals Enterprise (SRE): We are part of the new and innovative model, introduced across Network Rail's Southern region in April 2024 to deliver the £9bn renewals portfolio between 2024 and 2034.

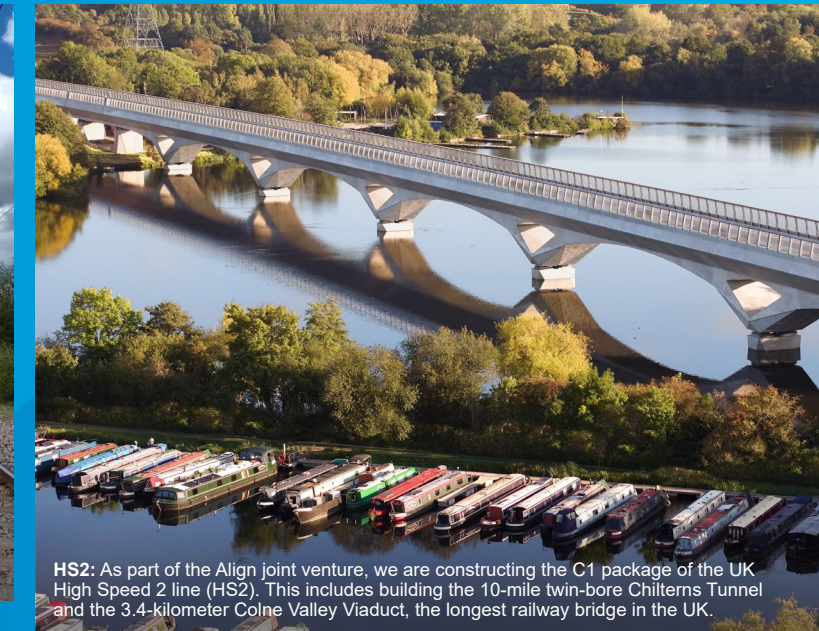

Network Rail's TransPennine Route Upgrade (TRU): We are helping to deliver essential upgrades between Leeds and York. TRU is a transformative, long-term railway infrastructure programme that will improve connectivity in the North.

Gosforth Depot: We have built a new depot at Gosforth in Newcastle designed to accommodate 46 new state-of-the-art trains for the Tyne and Wear Metro.

Scotland SPC Framework: We are delivering signalling, power and distribution, level crossings, and telecoms across Scotland. The framework is part of a major investment plan to maintain and improve the railway's infrastructure.

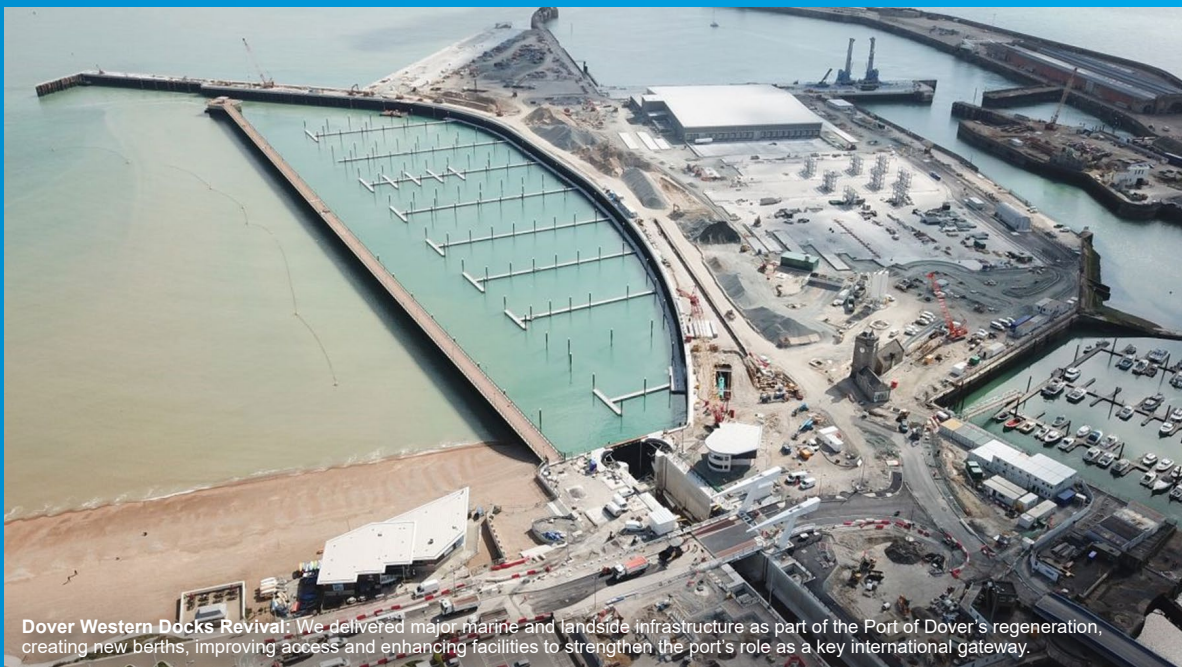

HS2: As part of the Align joint venture, we are constructing the C1 package of the UK High Speed 2 line (HS2). This includes building the 10-mile twin-bore Chilterns Tunnel and the 3.4-kilometer Colne Valley Viaduct, the longest railway bridge in the UK.

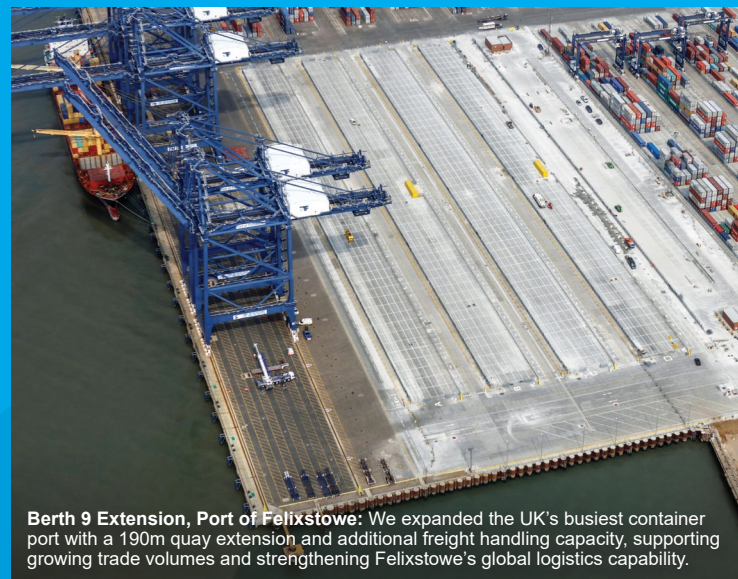

The South Yorkshire Supertram: We are extending the lifespan of the South Yorkshire Supertram, one of the region's best loved modes of transport.

Ports

We are leaders in maritime infrastructure and in providing multidisciplinary port-centric solutions across commercial ports, freeports and private industrial terminals.

Dover Western Docks Revival: We delivered major marine and landside infrastructure as part of the Port of Dover's regeneration, creating new berths, improving access and enhancing facilities to strengthen the port's role as a key international gateway.

Berth 9 Extension, Port of Felixstowe: We expanded the UK's busiest container port with a 190m quay extension and additional freight handling capacity, supporting growing trade volumes and strengthening Felixstowe's global logistics capability.

Elizabeth Harbour, Jersey: We are reconfiguring Elizabeth Harbour to increase freight capacity and enhance passenger experience as part of the St Helier Harbour Masterplan.

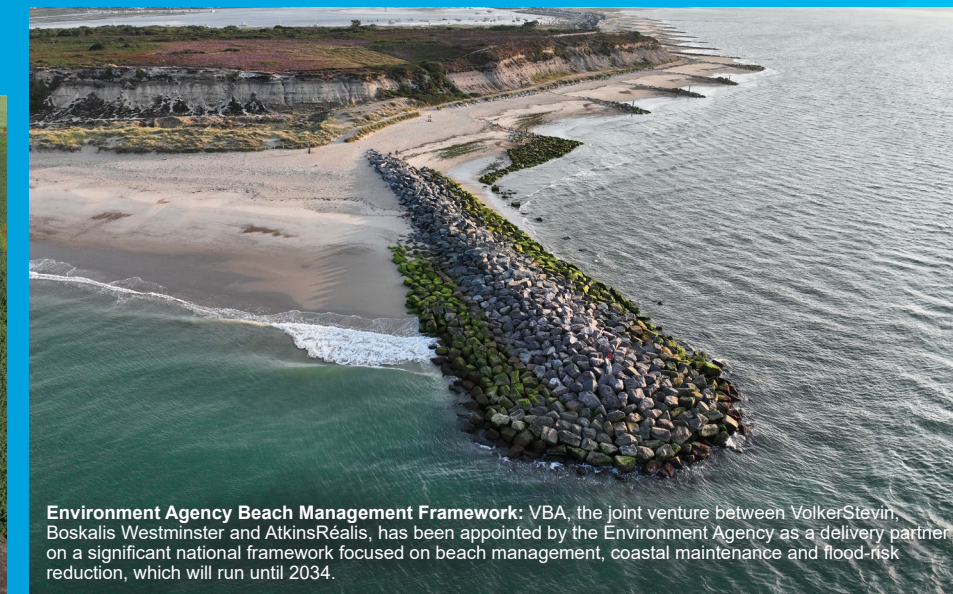

East Cliff Viaduct: We were contracted to undertake bearing replacement and associated works, including jacking and temporary works, on the East Cliff Viaduct into the Port of Dover.

Flood Risk Management and Water

We manage flood risk to protect tens of thousands of homes, businesses and amenities from coastal and fluvial flooding, while also supporting our clients to outperform regulatory commitments through sustainable, resilient water solutions.

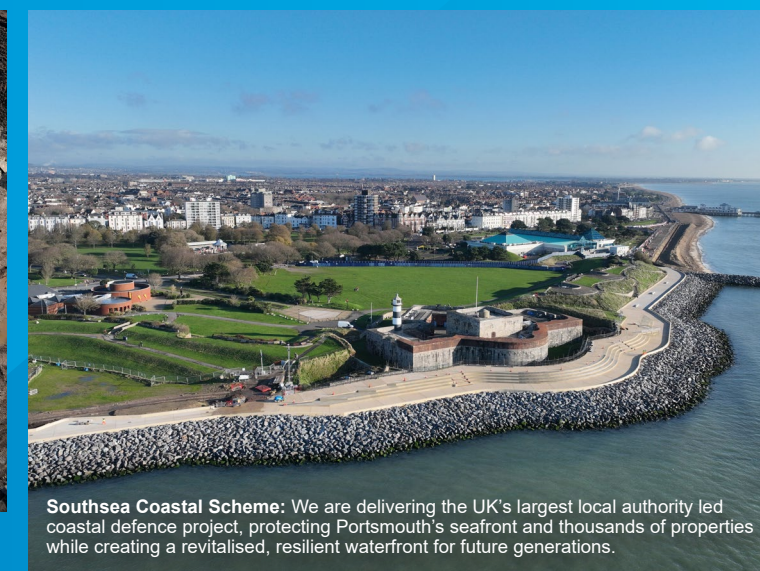

Anglian Water Strategic Pipeline Alliance: As a strategic partner for specialist trenchless solutions, we helped to construct a major new water transfer network that secures long-term regional supply while minimising disruption to sensitive environmental receptors.

Environment Agency Beach Management Framework: VBA, the joint venture between VolkerStevin, Boskalis Westminster and AtkinsRéalis, has been appointed by the Environment Agency as a delivery partner on a significant national framework focused on beach management, coastal maintenance and flood-risk reduction, which will run until 2034.

United Utilities AMP6 & AMP9: We are providing project management, design, build and commissioning solutions for complex capital projects associated with water and wastewater treatment assets, enhancing treatment capacity, resilience and environmental performance for communities across the North West of England.

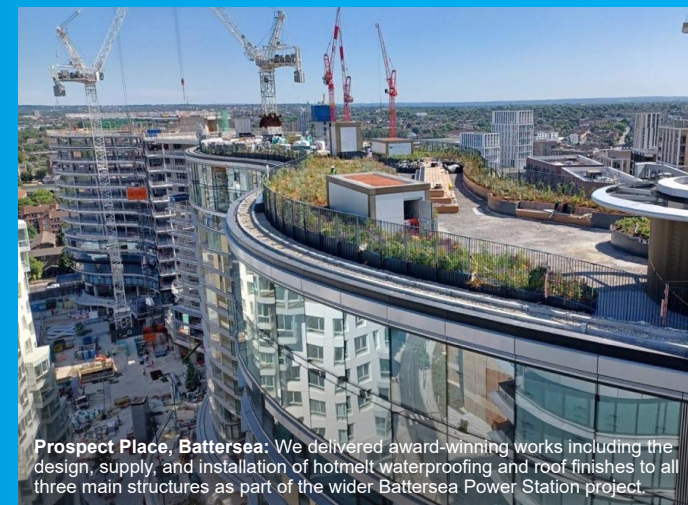

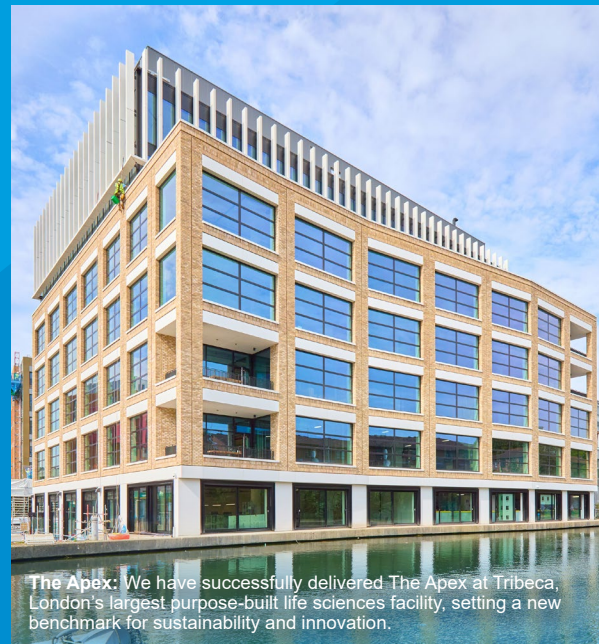

Southsea Coastal Scheme: We are delivering the UK's largest local authority led coastal defence project, protecting Portsmouth's seafront and thousands of properties while creating a revitalised, resilient waterfront for future generations.

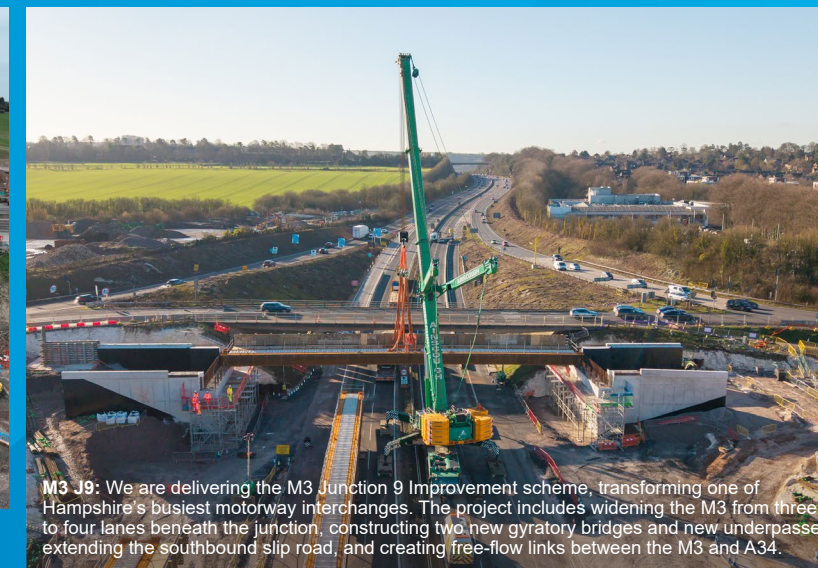

Environment Agency Collaborative Delivery Framework: We are the sole deliverer of flood risk management projects on behalf of the Environment Agency across the North West and South East of England, strengthening coastal, fluvial and tidal defences and supporting climate adaptation through engineered and nature-based solutions.

Building | We have a strong track record of delivering demanding, high-quality projects, often to fast-track programmes and in a live working environment.

Highways | The UK's strategic and local road networks are vital assets for communities and businesses, and our teams play a pivotal part in keeping these essential arteries running.

Our Specialist Businesses

We have a range of specialist businesses offering a variety of services.

Structural Rehabilitation

We are experts in structural rehabilitation, using our in-house capabilities to protect, repair, strengthen and future-proof infrastructure across the UK.

Specialist Rail Services

We deliver large, complex emergency stabilisation projects, supporting Network Rail's winter resilience programme. Services include temporary access, cable management, track crossings, equipment foundations, retaining structures, and minor rail civil works nationwide.

Marine Services

We provide tailored engineering solutions when access on, or adjacent to, water is required using a variety of modularised pontoon systems and an extensive marine fleet.

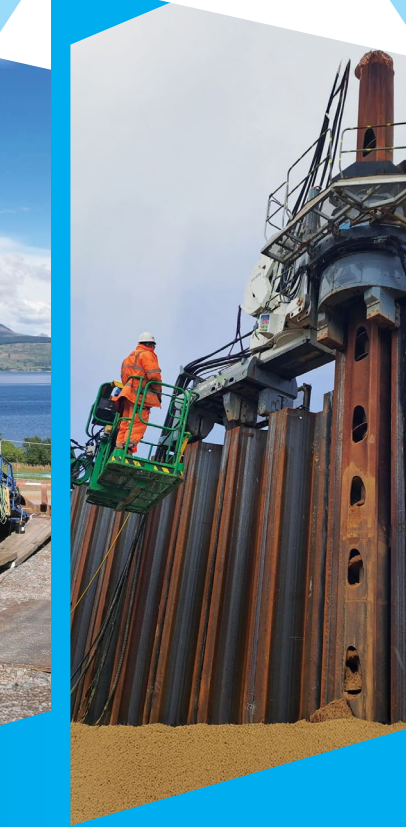

Horizontal Direction Drilling

We are specialists in Horizontal Directional Drilling (HDD). HDD provides the answer when rivers, nature reserves, roads, railways and existing cable and pipeline networks have to be crossed.

Steel Piling

We provide tailored, bespoke solutions, drawing on our steel piling capabilities for both permanent and temporary works, on land or over water.

Traffic Management Service

We deliver 24/7 fully compliant and strategically planned temporary traffic management solutions to NHSS 12 standard, working across both high and low speed road networks.

Independent Connection Provider (ICP)

We carry out the delivery of Low and High Voltage electrical connections on highway electrical assets working across various power networks.

Concrete Paving

We are a leader in concrete paving and have the largest fleet of batching and paving equipment in the UK, which include Slipform Pavers. Lean Concrete Paver and Concrete Batch Paver.

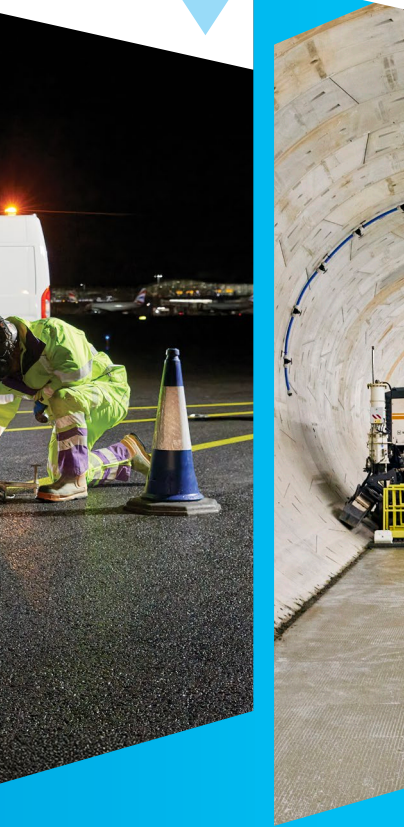

Specialist Aviation Services

We work across some of the busiest UK airports for both civil and military clients. Services include pavement maintenance, concrete repairs, electrical installation and airfield ground lighting.

Specialist Concrete Slipforming

PJ Davidson (PJD) is a group specialist concrete slipforming contractor providing slipform concrete barriers, slipform drainage products and pavement quality concrete.

People are at the heart of everything we do, when our people thrive, our business and our communities do too.

We are proud to be a business with a diverse, inclusive and safe workforce; and one that inspires the next generation, protects the natural environment and connects communities.

Our culture

Our teams are passionate and share a commitment to driving our success, and we are proud to have a culture that values our people, encourages innovation and supports safe, high-quality delivery. Our business is built on collaboration, trust and pride in delivering work that makes a lasting difference.

Working for us

We have a constant focus on recruiting and retaining the best talent in our industry to ensure we maintain the strongest possible pipeline of internal talent. This approach is supported by a range of activities to promote our opportunities across the Group, helping our talent to reach their potential.

Developing our people

We are committed to investing in the development of our teams across all levels of our business. Providing support to help our people develop their skills and grow their careers is a core business priority.

Safety and Wellbeing

We prioritise the safety and wellbeing of everyone who works with us, embedding strong standards, proactive risk management and a culture where people look out for one another. We continuously learn and improve to prevent harm and create safe, healthy workplaces across our operations and our supply chain.

Community impact

Our strength lies in finding local community projects, Community Interest Companies, social enterprises and organisations that benefit from our support. This may be through fundraising, a financial donation, gifts in kind, people power, or a more long-term investment, but whatever level of support provided, we always want to leave a positive legacy.

Planet positive

We take a holistic approach to the environment, reducing emissions for our direct operations and on our projects while protecting and restoring nature. Our focus includes energy efficiency, low carbon materials, responsible resource use, and enhancing biodiversity across our projects. We work with partners and communities to deliver lasting positive impacts for the natural world and future generations.

VolkerServices

Multidisciplinary engineering and construction group, supported by our core and specialist businesses.

Civil engineering and infrastructure.
Rail infrastructure and depots.
Commercial, industrial and education building.
Specialist Aviation Services, concrete paving.
Energy.

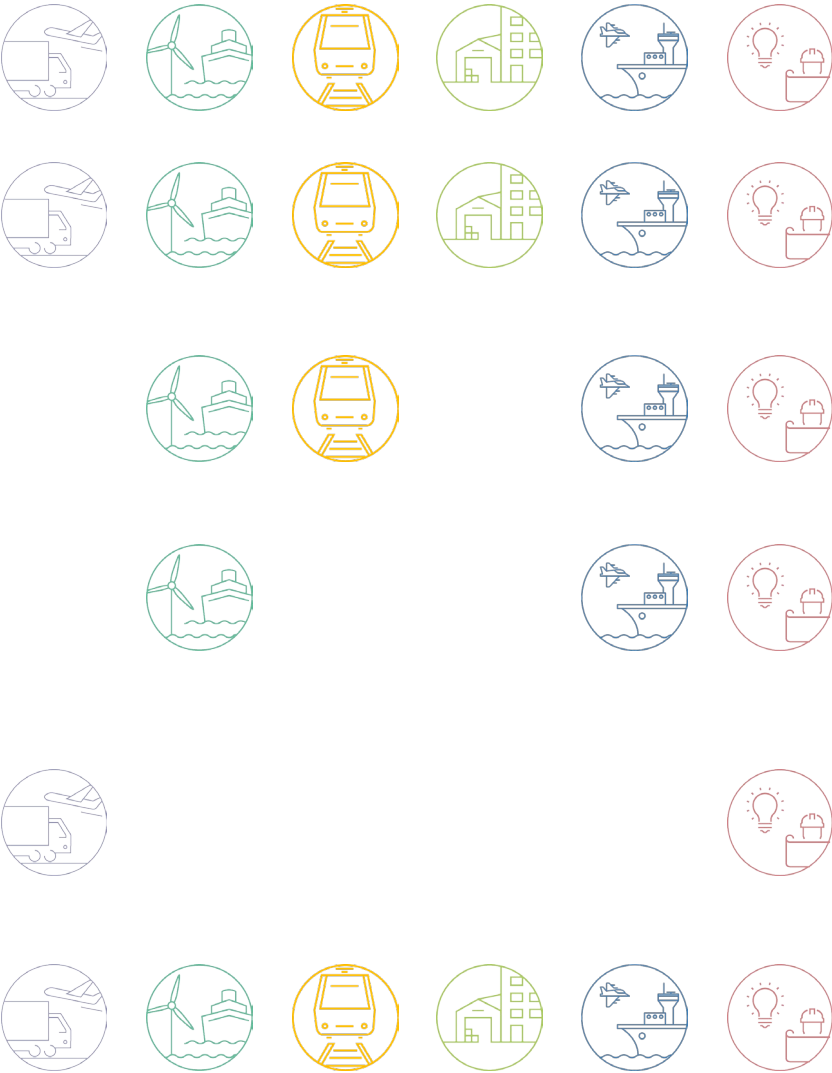

Multidisciplinary railway infrastructure, including major projects and metro and light rail systems.
Specialist services: Signalling, electrification, high voltage and low voltage power distribution, specialist plant and equipment, piling, track construction, renewals and maintenance and welding.

Marine, defence, energy, water and flood risk management infrastructure.
Specialist services: Extra High Voltage (EHV) cable systems; Horizontal Directional Drilling (HDD); driven and in-situ steel piling, geotechnical services and foundation engineering; temporary and permanent site accommodation, Linkflote™ pontoons and maritime plant.

Integrated highways and term maintenance services. Street lighting and electrical, surfacing, traffic management, bespoke projects.
Specialised services: Independent Connection Provider (ICP), Electric vehicle (EV) charging, Traffic management.

Specialist repair, strengthening and waterproofing capabilities across concrete and steel structures: bridges, highways, marine, car parks, railways and tunnels. Specialist lightweight decking and access solutions. Concrete paving, waterproofing and slipforming.

Supporting each of our business units through our key head office functions: ICT, HR, Finance, Communications, Facilities, Legal, Tax, Procurement, Corporate services, Sustainability and Fleet.
